

Computer Organization 2020

HOMEWORK 2 MIPS

Due date:

Overview

This homework aims to help you get familiar with the MIPS instruction set. In this homework, we introduce the format of the MIPS instruction set architecture (ISA), the MIPS assembly language and a MIPS simulation tool. You need to use instructions listed below to implement Pascal's formula computation.

General rules

- You need to complete this homework **INDIVIDUALLY**. You can discuss the homework with other students, but you need to do the homework by yourself. You should not **copy** anything from someone else, and you should not **distribute** your homework to someone else. If you violate any of these rules, you **will get NEGATIVE scores, or even fail this course directly**
- When submitting your homework, compress all files into a single **zip** file, and upload the compressed file to Moodle.
 - Please follow the file hierarchy shown in Figure 1.
F740XXXXX (your id) (folder)
src (folder) * Store your source code
report.docx (project report. The report template is already included. Follow the template to complete the report.)

Figure 1. File hierarchy for homework submission

- **Important! DO NOT** submit your homework in the last minute. Late submission is not accepted.
- You should finish **all the requirements** (shown below) in this homework and Project report.
- **If your code can not be recompiled by TA successfully using Mars, you will receive NO credit.**

Exercise

Implement Pascal's formula computation by using MIPS instructions listed in the table below.

We list some basics instructions for you. DO NOT using MIPS instructions not listed in this table.

MIPS ISA

R Type

Assembler Syntax

instruction	rd	rs	rt
-------------	----	----	----

Machine code Format

opcode		rs	rt	rd	shamt	funct					
31	26	25	21	20	16	15	11	10	6	5	0
opcode	Mnemonics	SRC1	SRC2	DST	funct	Description					
000000	nop	00000	00000	00000	000000	No operation					
000000	add	\$Rs	\$Rt	\$Rd	100000	Rd = Rs + Rt					
000000	sub	\$Rs	\$Rt	\$Rd	100010	Rd = Rs – Rt					
000000	and	\$Rs	\$Rt	\$Rd	100100	Rd = Rs & Rt					
000000	or	\$Rs	\$Rt	\$Rd	100101	Rd = Rs Rt					
000000	xor	\$Rs	\$Rt	\$Rd	100110	Rd = Rs ^ Rt					
000000	nor	\$Rs	\$Rt	\$Rd	100111	Rd = ~(Rs Rt)					
000000	slt	\$Rs	\$Rt	\$Rd	101010	Rd = (Rs < Rt)?1:0					
000000	sll		\$Rt	\$Rd	000000	Rd = Rt << shamt					
000000	srl		\$Rt	\$Rd	000010	Rd = Rt >> shamt					
000000	jr	\$Rs			001000	PC=Rs					

I Type

Assembler Syntax

instruction	rt	rs	imm
-------------	----	----	-----

Machine code Format

opcode								rs		rt		immediate							
31	26	25	21	20	16	15	0												

opcode	Mnemonics	SRC1	DST	SRC2	Description
001000	addi	\$Rs	\$Rt	imm	$Rt = Rs + imm$

001100	andi	\$Rs	\$Rt	imm	Rt = Rs & imm
001010	slti	\$Rs	\$Rt	imm	Rt = (Rs < imm) ? 1 : 0
000100	beq	\$Rs	\$Rt	imm	If(Rs == Rt) PC=PC+4+imm
000101	bne	\$Rs	\$Rt	imm	If(Rs != Rt) PC=PC+4+imm
100011	lw	\$Rs	\$Rt	imm	Rt = Mem[Rs + imm]
101011	sw	\$Rs	\$Rt	imm	Mem[Rs + imm] = Rt

J Type

Assembler Syntax

instruction	Target(label)
-------------	---------------

Machine code Format

opcode	address
31	26 25 0

opcode	Mnemonics	Address	Description
000010	j	jumpAddr	PC = jumpAddr
000011	jal	jumpAddr	R[31] = PC + 8 ; PC = jumpAddr

Pascal's formula

In mathematics, Pascal's rule (or Pascal's formula) is a combinatorial identity about binomial coefficients. It states that for positive natural numbers n and k,

$$C(n, k) = C(n - 1, k - 1) + C(n - 1, k) \text{ with } 1 \leq k \leq n$$

where $C(n, k)$ is the binomial coefficient of the x^k term in the expansion of $(1 + x)^n$.

Pascal's rule can also be generalized to apply to multinomial coefficients.

Pascal's formula Pseudo code

```
function pascal(n, m)
  if (m == n || m == 0)
    return 1
  else
    return pascal(n - 1, m - 1) + pascal(n - 1, m)
```

Homework Requirements

1. Implement Pascal's formula computation according to the above MIPS

instruction table.

2. Use MIPS Simulator (Mars) to run your assembly code to compute **pascal(10, 5) and store result into register \$v0.**
3. Finish your Project report

Note: please take snapshot of your result and paste into your report.

Example: Fig. 2

Registers	Coproc 1	Coproc 0	
Name	Number	Value	
\$zero	0	0x00000000	
\$at	1	0x00000000
